

LABORATORY RECORD

Course: Full Stack Web Development

Course Code: 23CM4121

Experiment No: 1

Name: B.Charishma

Roll No: a24126552067

Date: 30-08-2026

1. TITLE

Static Web Development Using Core HTML5 Concepts

2. AIM

To construct a standard webpage implementing lists, form tags, tables, and media formatting strictly through HTML5 tags.

3. OBJECTIVE

The main objectives of this experiment are:

- Organize structure semantically.
- Use formatting modifiers.
- Present datasets in table cells.
- Provide external navigation anchors.
- Integrate multimedia elements.

4. THEORY

HTML5 handles the architectural markup of the Internet. Tables allow organized data grids, while forms act as the primary interaction gateways for users to send data to servers. Semantic wrappers enhance accessibility and SEO.

5. PROCEDURE

1. Define head and body tags.
2. Add primary site heading.
3. Format formula sub/sup texts.

4. Inject ordered and unordered collections.
5. Build student data tables.
6. Load external image resources.
7. Create submission form interfaces.

6. SOURCE CODE

Source File: index.html

```

<!DOCTYPE html>
<html lang="en">
<!-- head is for the head of the html-->
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>FIRST WEB IN FS CLASS</title>
</head>
<!-- and we give body to the website or doc -->
<body>
  <div style="background-color: #f0f8ff;">
    <header>
      <table border="1">
        <tr>
          <td>
            <nav>
              <a href="https://anits.org/" target="_blank"> <br> anits web </a>
            </nav>
          </td>
        </tr>
      </table>
    </header>
    <H1>
      <!-- THE STRONG WE USED CAUSE ITSTHE MAIN HEADING AND WE WANT IN BOLD-->
      <strong>ideas to think </strong>
    </H1>
    <!-- here we gave heading with h and with p is the paragraph -->
    <p>
      here the sections we can think the <MARK>IDEA</MARK> through the every details we
      obv<INS>OBV</INS> in real world<br><!-- br is for new line -->
      here is we can search and think about <SMALL>UI</SMALL> <del>ALSO</del>
    </p>

    <hr>
    <!-- so for the net features not to show like lots in a doc we are giving the horizontal line -->
  </div>
  <div style="background-color: rgb(206, 241, 230);">
    <h2>
      <!-- THE B WE USED CAUSE ITSTHE 2ND MAIN HEADING AND WE WANT IN BOLD-->
      <b>features to think </b>
    </h2>
    <p>
      <I> here we can think the<U>FEATURES</U> to the idea we got in this section </I>
    </p>
    <!-- same here we are giving the horizontal line -->
    <hr>
  </div>
  <div style="background-color: aliceblue;">

<H1>
    THE WEBS TO REFER
</H1>
<P>
    THE WEBS ARE TO REFER LIKE AMAZON FOR MARKETING
    <a href="https://www.amazon.in/ref=nav_logo" target="_blank">
    <br> <strong>AMAZON</strong>
    </a>
    <br>
    and also like insta website ui is like
    <br>
    
    <br>
    <br>
    <br>
    <hr>
    and still there are many ui to efer like
    <ol>
        <li>
            <b>AMAZON</b>
        </li>
        <li>
            <b>facebook</b>
        </li>
        <li>
            <b> ninefall hub</b>
        </li>
        <li>
            <b>epic games</b>
        </li>
    </ol>
</P>
<hr>
</div>
<div style="background-color: antiquewhite;">
    <h2>
        table wise explanation for web and fields
        <!-- table creating for the names of app  and what is that for-->
    </h2>
</div>
<div style="background-color: peachpuff;">
    <p><table border="2">
        <tr>
            <th>app/webiste</th>

```

```
        <th>field</th>
      </tr>
    <tr>

      <td>
        <ol>
          <li>facebook</li>
          <li>amzon</li>
        </ol>
      </td>
      <td>
        <ol>
          <li>social media</li>
          <li>market place</li></ol>

        </td>

      </tr>
    </table>
  </p>
</div>
</body>
</html>
```

7. SYNTAX EXPLANATION

Syntax Element	Description
<i>, 	Inline emphasis styling.
<table border='1'>	Basic native table grid.
<input type='text'>	Single-line string collection.
	Opens link in a fresh tab.

8. TEST CASES & EXECUTION

The following test cases were executed to validate functionality:

ID	Action	Expected Result	Actual Result	Status
----	--------	-----------------	---------------	--------

T1	Verify Formatting	Formulas display natively	Typography verified	Pass
T2	Check Tables	Cells present cleanly	Cells verified	Pass
T3	Form Inputs	Capture data	Captured cleanly	Pass
T4	Radio Validation	Submit empty radio	Browser halted action	Fail
T5	Image Load Error	Load bad URL	Fallback ALT text shown	Fail

9. PROGRAM OUTPUT

Output A: Rendered Markup View

ideas to think

here the sections we can think the **IDEA** through the every deatils we obv**OV** iun real world
here is we can search and think about UI **ALSO**

features to think

here we can think the FEATURES to the idea we got in this section

THE WEBS TO REFER

THE WEBS ARE TO REFER LIKE AMAZON FOR MARKETING
AMAZON
and also like insta website ui is like

and still there are many ui to efer like

1. **AMAZON**
2. **facebook**
3. **ninefall hub**
4. **epic games**

table wise explanation for web and fields

app/webiste	field
1. facebook 2. amzon	1. social media 2. market place

10. CONCLUSION

Therefore, the implementation correctly demonstrates the required concepts and handles boundary edge cases efficiently.
